

# Versa-Mount™ Adjustable Angle Mount

Locking / dampening instructions (tighten in order)

1

2

1 Tighten bolt

2 Tighten set screw

## How to lock & unlock the Adjustable Angle Mount

### Step 1 — Hand-tighten the bolt

Start by hand-tightening the main bolt until the mount is held in place.

At this stage, it should be snug but still adjustable.

### Step 2 — Final tighten to lock it in

Once the angle and position are exactly where you want them, fully tighten the bolt “*first*”, then tighten the set screw to lock the mount securely in place. Reverse this sequence to unlock the mount.

*Tip: Tighten gradually and check alignment as you go to avoid shifting the mount during the final turn.*
